Executive summary

At the beginning of this project, the manager Antonio contacted us as a group, every teammate at the same time. The reason for his selection was our friendship and the previous experience of working together we had in the Design and Testing I subject.

Revision table

First revision	2/14/2024
Last update	2/16/2024

Introduction

In this report we will talk about the working methodology, agreements, commits, penalties, awards and goals.

Contents

As a team, we all agree with the working plan distribution and we commit to do every essential task/work at the group mandatory deliverables. We will do a weekly meeting to keep the work in the delivery time. We have decided to do the maximum supplement requires in every delivery. We will decide the number of them at the beginning of every deliverable, pointing to having good grades.

Before delivering a version of the project we will have a retrospective meeting, to talk about the objectives of this "sprint". We will consider that we have been performing well if we had achieved our supplementary goals for the delivery. We will also debate about what we can improve and what we should stop doing.

Working hard will be rewarded with being the first to have a job cut if a teammate doesn't work well. In addition, having a bad performance will be amonestated by taking on partner work (the hardest worker).In case of a group member that doesn't make any effort in a delivery, he will be fired.

Conclusions:

This is our chartering report to introduce our group, work methodology and goals. We all agree with the conditions exposed and commit to work the hardest we can in this subject.
